

Selenium 3.6.2

Web research made easy.

About Selenium

Selenium is an application designed to assist with conducting research on the Internet. It allows you to create multiple projects, each of which has its own writing section, bibliography manager, outline editor and PDF manager. Selenium also incorporates a full-featured tabbed web browser to allow you to conduct research and work with the information you find all from within the same application.

What's New

New Features

- Added crash reporter

Changes

- Changed label of Save toolbar item to Export to better reflect its functionality

Bug Fixes

- Fixed glitches when exporting bibliographies containing accented characters
- Fixed potential crash when scanning invalid barcodes
- Improved reliability of barcode scanner
- Fixed inserting citation style tokens in French

Installing Selenium

To install Selenium, just drag it to your Applications folder or anywhere else you wish to keep it.

Getting Started

If this is the first time you have ever used Selenium, it will create a new project for you to work with. Double click the project in the light blue source list to rename it. Selenium's modes can be toggled using the tabs in the toolbar, or by choosing the mode you want from the View > Editing Mode menu. To use Selenium's browser features, simply enter a URL or search term in the text field beneath the toolbar.

Getting Help

Selenium is designed to be easy to use, but if you need help, you're not out of luck. The built in help, accessible by choosing Help > Selenium Help, should solve most basic problems. If you don't find a solution there, use the Email Support... menu item in the Help menu or send an email to support@stuffediggysoftware.com. To find out more about Selenium, visit the Selenium website at <http://www.stuffediggysoftware.com/selenium.html>. Thanks for trying Selenium!
